

NAME: _____ PERIOD: _____ DATE: _____

Graph the following:

1. $y = \frac{1}{3}x - 4$

2. $-x + 3y = -6$

3. $x = -2$

4. $y = -3x$

**Linear Equations:**

- Find the rate of change of the line that contains the following points $(-3, 2)$ and $(12, -7)$
- What is the slope-intercept form of the line that containing the point $(0, 3)$ and slope $-\frac{2}{3}$.
- What is the slope-intercept form of the line that is parallel to the line $y = 3x - 4$ and passes thru the origin?
- What is the slope-intercept form of the line passing through $(-1, 8)$ and $(-1, 4)$?
